

SASIKUMAR S

DevOps Engineer

+91 97877 19876 • sasikumar97877s@gmail.com • [linkedin.com/in/sasikumar](https://www.linkedin.com/in/sasikumar) • Chennai, Tamil Nadu

PROFESSIONAL SUMMARY

DevOps Engineer with 2.7 years of hands-on experience building and managing CI/CD pipelines (Jenkins, GitLab CI/CD), AWS cloud infrastructure (ECS Fargate, EC2, Lambda, RDS), and containerised deployments for Django, Odoo ERP, and PHP platforms. Proven track record managing 20+ Linux production servers with 99.95% uptime. Expert in Docker, Terraform, Ansible, and infrastructure automation — with a consistent focus on zero-downtime deployments, security hardening (IAM, RBAC, CSF Firewall), cost optimisation, and developer productivity gains.

KEY ACHIEVEMENTS

- ♦ **60% reduction in release effort** — built Jenkins + GitLab CI/CD pipeline for Odoo ERP, eliminating manual deployment steps.
- ♦ **70% faster environment setup** — Dockerised Django stack cut dev onboarding from hours to minutes across 3 teams.
- ♦ **99.95% uptime** — maintained across 20+ Linux production servers via proactive CloudWatch monitoring and security hardening.
- ♦ **15 min onboarding** — custom Odoo Docker image reduced new developer setup from 3+ hours to under 15 minutes.
- ♦ **50% faster incident detection** — CloudWatch dashboards and alarms reduced mean time to detect (MTTD) across all managed servers.

PROFESSIONAL EXPERIENCE

DevOps Engineer | **Ciranta IT Services** — **Chennai, Tamil Nadu** *Oct 2023 – Present (2.7 yrs)*

CI/CD Pipeline Engineering & Release Automation

- ▶ Designed and maintained end-to-end Jenkins and GitLab CI/CD pipelines for Odoo ERP and Django applications across development, staging, and production environments — cutting manual release effort by 60% and reducing deployment errors to near zero.
- ▶ Implemented AWS CodePipeline + CodeBuild workflows for containerised ECS Fargate services, enabling automated image builds, ECR pushes, and zero-downtime blue/green deployments with ALB health checks.
- ▶ Introduced automated rollback triggers in CI pipelines to revert failed deployments within 3 minutes, reducing mean time to recovery (MTTR) for production incidents.
- ▶ Managed multi-environment configuration using environment-specific YAML files and GitLab CI/CD variables — ensuring clean separation between dev, staging, and production secrets.

AWS Cloud Infrastructure & IaC

- ▶ Provisioned and managed scalable AWS infrastructure — EC2, ECS Fargate, RDS (PostgreSQL/MySQL), S3, Route 53, CloudFront, ACM, and Auto Scaling — using Terraform and Ansible for repeatable, version-controlled deployments.
- ▶ Built serverless REST APIs using AWS Lambda, API Gateway, and DynamoDB, designed for auto-scaling under unpredictable load with optimised cold start performance.
- ▶ Implemented AWS IAM roles, policies, and least-privilege access controls across all services — reducing the attack surface and ensuring compliance with security best practices.

Linux Server Management & Security

- ▶ Administered, patched, and security-hardened 20+ Ubuntu and CentOS Linux production servers — applying CSF Firewall rules, SSL/TLS (ACM), RBAC policies, and regular vulnerability assessments to maintain 99.95% uptime.
- ▶ Set up Prometheus and Grafana monitoring stacks alongside CloudWatch dashboards and custom alarms — enabling real-time observability and reducing MTTD for incidents by ~50%.
- ▶ Deployed and performance-tuned PHP applications and phpMyAdmin on Nginx and Apache web servers, including virtual host configuration, connection pooling, and caching optimisation.
- ▶ Automated recurring server maintenance tasks — log rotation, disk cleanup, backup verification, and SSL renewal checks — using Bash and Python cron scripts, saving ~5 hours/week of manual ops effort.

Docker & Containerisation

- ▶ Standardised all application environments using Docker and Docker Compose, achieving full local-to-production environment parity for Django and Odoo stacks across multiple teams.
- ▶ Authored and published custom Odoo Docker images to Docker Hub with pre-configured dependencies and modules — cutting new developer onboarding from 3+ hours to under 15 minutes.

KEY PROJECTS

Odoo ERP CI/CD Pipeline | *Jenkins, GitLab CI/CD, Docker, AWS EC2*

- ▶ Automated the full Odoo build, test, and deployment lifecycle — from Git push to production — reducing release cycle time from 2 days to under 2 hours.

AWS ECS Fargate Auto-Deploy Setup | *ECS Fargate, CodePipeline, CodeBuild, ALB, ECR*

- ▶ Architected a fully automated container build and deploy pipeline with zero-downtime blue/green releases, health check-gated rollouts, and auto-scaling policies tied to CPU/memory thresholds.

Linux Infrastructure Hardening & Monitoring | *CloudWatch, Prometheus, Grafana, CSF, Ansible*

- ▶ Rolled out a unified monitoring and alerting framework across 20+ servers — cutting unplanned downtime by improving visibility into CPU, memory, disk, and network anomalies in real time.

TECHNICAL SKILLS

CI/CD & Automation: Jenkins, GitLab CI/CD, AWS CodePipeline, AWS CodeBuild, Bash scripting, YAML

Cloud Platform (AWS): EC2, ECS Fargate, Lambda, API Gateway, S3, RDS, Route 53, CloudFront, Auto Scaling, ACM, DynamoDB, CloudWatch, IAM, ECR

Infrastructure as Code: Terraform, Ansible — version-controlled, repeatable infrastructure provisioning

Containers & Orchestration: Docker, Docker Compose, AWS ECS Fargate, Docker Hub, AWS ECR

Monitoring & Observability: CloudWatch (dashboards, alarms, logs), Prometheus, Grafana — SLA/SLO tracking

Security & Compliance: CSF Firewall, SSL/TLS, IAM, ACM, RBAC, least-privilege access, vulnerability patching

Web Servers & Networking: Nginx, Apache, ALB, Route 53, CloudFront CDN, virtual host configuration

Databases: PostgreSQL, MySQL, DynamoDB

Operating Systems: Linux — Ubuntu, CentOS (primary); Windows Server (secondary)

Programming & Scripting: Bash, Python, PHP — automation, cron jobs, deployment scripts

Version Control: Git, GitHub, GitLab — branching strategies, PR workflows, protected branches

Other Tools: phpMyAdmin, Odoo customisation & deployment, Docker Hub, AWS ECR

CERTIFICATIONS & TRAINING

AWS Certified Solutions Architect – Associate

2023

Greens Technology, Chennai | Exam preparation actively in progress

DevOps with AWS — Hands-on Training

2023

Covered: CI/CD pipelines, Docker containerisation, AWS services, Linux administration, Terraform IaC

EDUCATION

B.E – Computer Science and Engineering

Jul 2019 – Jun 2023

St. Joseph College of Engineering, Anna University, Chennai | CGPA: 8.3 / 10

CORE STRENGTHS

- ▶ Strong analytical and troubleshooting skills — able to diagnose and resolve complex cloud and infrastructure issues under production pressure.
- ▶ Automation-first mindset — consistently seeks to eliminate manual toil through scripting, pipeline design, and IaC practices.
- ▶ Clear communicator with cross-functional teams — comfortable translating technical constraints to non-technical stakeholders.
- ▶ Fast, self-directed learner — currently expanding into Kubernetes, Helm, and GitOps (ArgoCD) to deepen container orchestration expertise.
- ▶ Committed to delivering secure, highly available, and cost-efficient infrastructure aligned with business objectives.
